

# **Navajo Abandoned Uranium Mine**

## **Site Screen Report**

*This form is for use at the site of abandoned uranium mines (AUM) located on Navajo Nation lands. Applicable sites include all mine and mine features that have or have not undergone reclamation by the Navajo Abandoned Mine Lands Reclamation Program, including features, adits, pits and waste piles. Applicable sites also include all AUM sites listed in the USEPA CERCLIS database, all sites listed in the 2008 AUM GIS Report issued by USACOE and USEPA, all AUM sites on allotment lands associated with the Navajo Nation, and any and all AUM sites not listed in any database located on Navajo lands. Reconnaissance of any sites located on lands adjacent to Navajo lands that may be impacting Navajo lands will need to be coordinated with the authorities appropriate to those lands.*

*The purpose of the form is to ascertain the status and location of the identified AUM site, and record all immediate site information associated with the mine site. Decisions and recommendations on what additional steps are needed will be provided on a separate document.*

## Part II        Summary of radiological readings

### Highest gamma radiation measurement:

131,280 counts per minute (cpm)

### Describe any other radiological measurements:

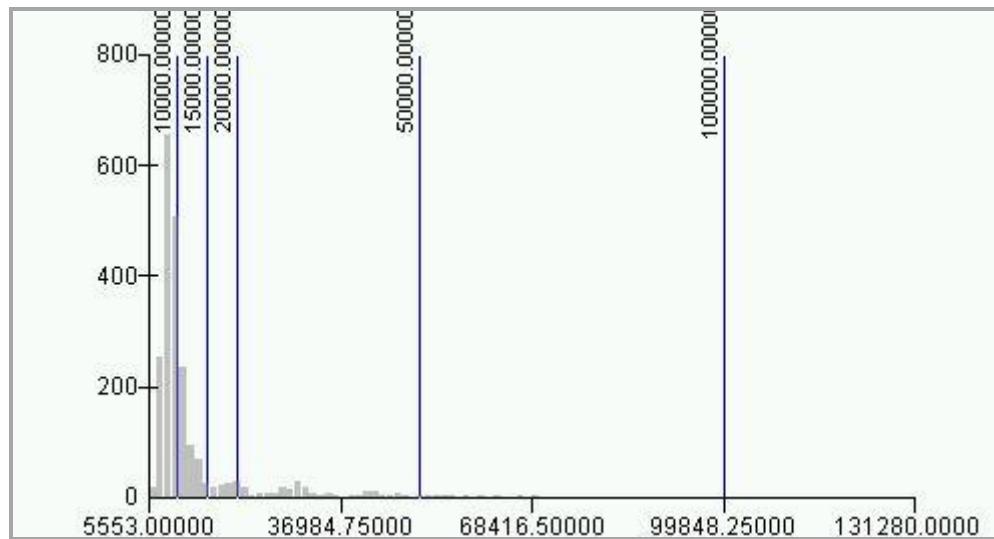

A total of 2,175 gamma radiation measurements were collected from the mine site, ranging from 5,553 cpm to 131,280 cpm. Measurements in the vicinity of the possible surface pit were found at levels of approximately 110,000 cpm, and at the waste pile ranging from 30,000 to 130,000 cpm. The measurements are represented in Figures 1 and 2.

**Background Locations**  
#1 8,826 cpm

**Average background = 8,826 cpm**

### Distribution Chart and Statistics:

The following chart and statistics were generated by ESRI ArcGIS 9.3.1, and show the general distribution of the site gamma radiation measurements. The horizontal X axis represents the gamma radiation reading levels in cpm (lowest levels to the left). The vertical Y axis represents the frequency of each gamma radiation level.

Count:	2175
Minimum:	5553.00000
Maximum:	131280.00000
